

Math/CS Overload Policy

The Department of Mathematics and Computer Science will make every effort to find space in our courses, particularly for those students with a demonstrated course requirement in a specific semester (to allow the completion of the major for graduation).

Students who were unable to get a class during their registration appointments should use OPUS to check for openings during the add/drop period.

Beyond that, requests for overloads can be made by using our overload request form subject to the dates below:

Form Available: Jan 6, 2014

Will be available on our website: www.mathcs.emory.edu

Submission Deadline: Jan 15, 2014

Forms will not be accepted after 7pm EST on 1/15/2014.

Notification by: Jan 21, 2014 by 10am EST to permit students to adjust their schedules before the end of add/drop/swap.

Detailed instructions will be available on the overload form. The form will require your academic advisor to certify that it is essential that a requested course be taken this semester for you to complete your academic program in time for graduation.

Unfortunately, there are no overloads for Math 107, Math 111, and Math 112. All three courses are offered every semester (including summers) and students should plan to defer it a semester if necessary. Students should investigate QTM 100 as an alternative to Math 107.
