Find name of companies with the highest number of "inter-city commuters".

\[ H_1 = \prod_{\text{comp-name}} \left( \bigcap_{\text{pers-name}} \left( \text{lives} \land \text{works} \land \text{located-in} \right) \right) \]

\[ H_1 = \left( \text{comp-name, person working for the company that does not live in the city where company is located} \right) \]

\[ = \left( \text{comp-name, name of inter-city commute employee} \right) \]

\[ H_2 = \prod_{\text{comp-name}} \left( \text{count(pers-name)} \right) \]

\[ H_3 = \prod_{\text{max(count)}} \left( H_2 \right) \]

\[ \text{answer} = \prod_{\text{comp-name}} \left( H_2 \bigtriangleup H_3 \mid \text{count} = \text{max} \right) \]
