1. Exam will be out of 65 points and will take 65 minutes. Each point is worth roughly 1 minute. Therefore a 5 point problem should take you approximately 5 minutes. Use this feature to pace yourself and manage your time.

2. 5 minutes will be allotted to seating, passing out exams, etc.

3. Exam will end promptly at 9:35 or 11:10am
   1. Put down your pencil when told to do so.
   2. I take 5 points off your exam if I have to tell you multiple times.

4. I will not answer questions during the exam. There are too many people and not enough space.

5. No trips to the restroom during the exam. If you feel you need an exception to this policy, you need to notify me ASAP.

6. There is assigned seating, and you must sit in your assigned seat. Seating charts will be posted by tomorrow (Friday) afternoon on Blackboard and Piazza. You should read your section’s seating chart and know where you should be sitting BEFORE entering the room. If you are in the incorrect seat, you will be asked to move. If you find another student in your seat, notify me immediately.

7. There will be a Scantron portion. Bring a pencil and a good eraser with you. I will not have extras.

8. The exam will consist of two types of questions:
   1. Approximately 20-30 multiple choice questions. These are SINGLE answer questions. Select the best answer and mark it on your Scantron. Answers placed on your exam booklet will not be graded. No partial credit for these questions
   2. Code writing questions. You will be given a problem description and will have to write code (on paper) to solve the problem. Partial credit is awarded. Your code should be (mostly) syntactically correct.

9. Correctly marking your Scantron forms:
   1. If you mark multiple answers, the machine will automatically mark it incorrect.
   2. Partially marked answers may or may not be read correctly. The following examples are NOT correctly marked:

10. All answers must be recorded on your Scantron form BEFORE time is called. You will not be allowed to transfer answers from your exam booklet to your form after time is called.

11. Resources for studying:
    1. codingbat.com (sections as discussed in class)
    2. Old exams/quizzes (linked from class calendar) These are not multiple choice, but the content of questions is similar.
    3. Homework & lab solutions (see labs and homework pages)
